

The Multi-Skilled Professional

A practical worksheet for identifying the human capabilities that become more valuable as AI changes the way we work.

THE IDEA

AI can accelerate tasks, but professional value is rarely built on one task alone. The strongest professionals combine technology with judgement, communication, curiosity, relationships and the ability to turn information into action.

1. YOUR CORE EXPERTISE

What do you know deeply?

List the subjects, functions or industries where experience gives you context that a generic tool does not have.

Where do people rely on you?

Think about the problems, questions or situations for which colleagues regularly seek your help.

What judgement have you earned?

Identify decisions you can make better today because you have seen patterns, consequences and trade-offs over time.

2. YOUR HUMAN SKILLS

Communication

Can you explain complex ideas clearly, listen well and adapt your message to different audiences?

Judgement

Can you distinguish what is technically possible from what is appropriate, responsible or strategically wise?

Relationships

Can you build trust, navigate disagreement and understand what people may not say explicitly?

Leadership

Can you create clarity, take ownership and help others move from discussion to action?

The Multi-Skilled Professional

Combine human capability with technology leverage.

3. YOUR TECHNOLOGY LEVERAGE

What can AI accelerate?

Identify repetitive, research-heavy, drafting or organising tasks that technology can help you complete faster.

What should remain human-led?

Identify work involving accountability, sensitive judgement, relationships, ethics or decisions where context matters.

Where can you combine both?

Look for workflows where AI handles the first pass while you provide direction, verification and final judgement.

4. YOUR SKILL STACK

Skill 1 - Expertise

What professional knowledge anchors your credibility?

Skill 2 - Communication

How well can you turn knowledge into understanding and influence?

Skill 3 - Technology

Which digital or AI capabilities multiply what you can already do?

Skill 4 - Execution

How effectively can you turn ideas, decisions and plans into completed work?

Skill 5 - Human insight

What do you understand about people, context and consequences that technology alone cannot supply?

The Multi-Skilled Professional

Turn reflection into your next growth move.

5. YOUR NEXT GROWTH MOVE

Strengthen

Which existing skill would create the biggest improvement if you became noticeably better at it?

Add

What adjacent skill would make your current expertise more useful or versatile?

Combine

Which two or three skills could you deliberately combine into a distinctive professional advantage?

Practise

What real project can you use this month to develop that combination rather than merely learning about it?

AINIE WAHID QUICK TEST

If one part of your job became automated tomorrow, **what combination of expertise, judgement, communication and human insight would still make you valuable?**
